/note-"Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; plasmid DNA from the normalized library NCI_CGAP_GC4 was prepared, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The drive was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 1257996-1258631, 1469064-1470983, and 1475592-1476743). Subtraction by

                             3'. The cDNAs were ligated to LL-Sal3A: 5'
GCTARTGACGTCGACTATCC 3' and LL-Sal3B: 5'
GCTARTGACGTCGACTATCC 3' and LL-Sal3B: 5'
GGATACTCGACGTCAAT 3'. The cDNAs were size-selected and amplified by long-range PCR using Ex Taq polymerase for 18 cycles. The PCR-amplifiable cDNA mixture went through one round of equalization and was digested with SalI/NotI and cloned into the SalI/NotI sites of the pSPORTI plasmid vector (Life Technologies). The library was
                                                                                                                                                                                                                                                                                                                                                     /note="Organ: embryo; Vector: psport1; Site_1:
